

Executive Summary

This report analyzes behavior data from 910 students across Years 7–11. Key findings reveal that about 81 % of students are high-risk (>20 behaviors), with 1,307 students falling into Orange status requiring attention. Year 9 shows the highest frequency, and 40–45% of all incidents occur during the midday peak period (11:30–14:30). The most actionable insight: strategic staff deployment during peak hours could resolve nearly half of all disciplinary issues, significantly improving teaching quality and school culture.

INSIGHT 1: Quick Look Behavior- School-Wide Overview

This table provides a quick overview of the entire school by showing the distribution of students based on the number of negative behavior records they have received. It helps school leadership immediately understand the scale of behavioral challenges across the school.

Quick Look Of Behavior Records 910 Students

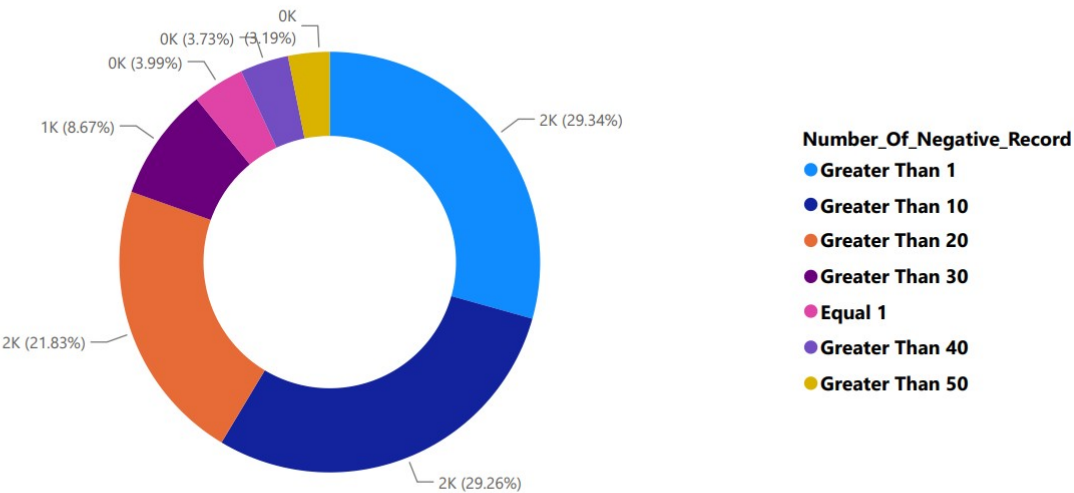

Figure 1: Quick Look - Distribution of students by number of negative behavior records

This table provides school leadership with an immediate, high-level overview of the discipline situation across the entire school. The data shows the percentage of students falling into each behavior frequency category:

- **29.34%** of students have more than 1 negative behavior record (the majority of students with any behavioral issues)
- **21.83%** of students have more than 10 records (a significant group requiring attention)
- **8.67%** of students have more than 20 records (high-risk students needing intervention)
- **3.73%** of students have more than 30, 40, 50 records, or exactly 1 record

This quick snapshot enables school leadership to:

- Understand the overall scale of behavioral challenges
- Identify what percentage of students are in the high-risk category (>20 records)
- Allocate resources appropriately based on the distribution
- Set priorities for intervention programs

The data reveals that while a large portion of students have some behavioral issues, a smaller but significant group (8.67%) requires immediate, intensive intervention.

INSIGHT 2: Top Students BUT In the Wrong Way

This chart shows the top 10 students with the highest number of negative behavior records across all students. These students are distributed across different year groups (7 to 11).

Top Students BUT In the Wrong Way Base on Year

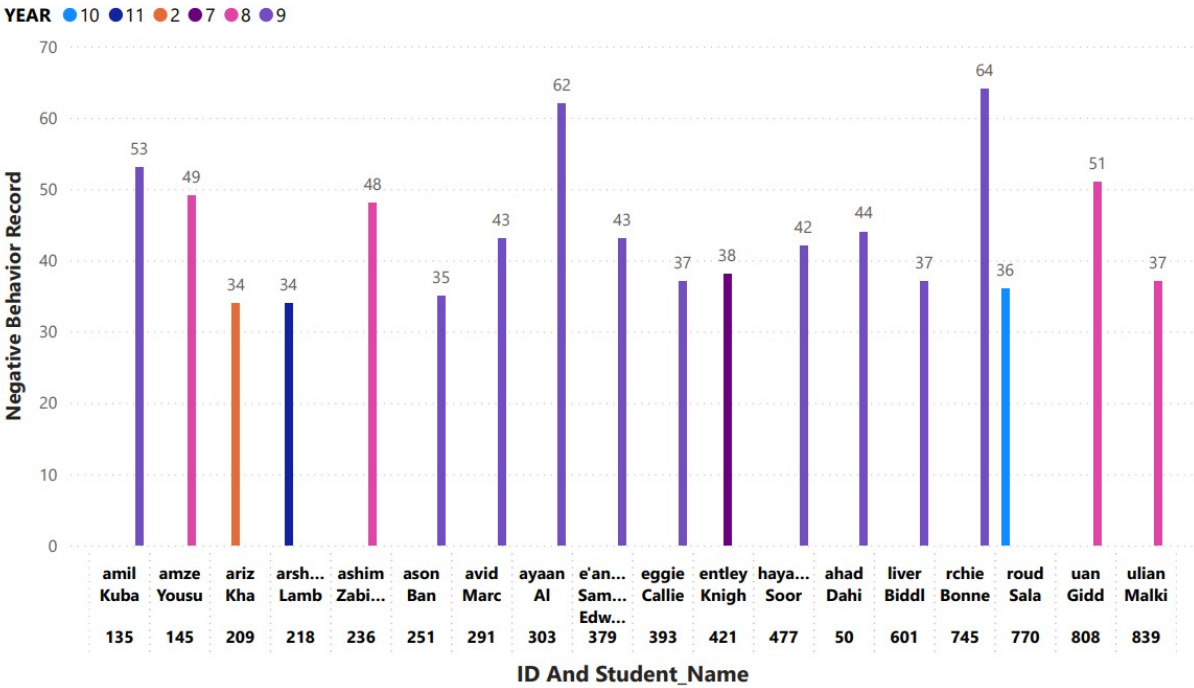

Figure 2: Top students with the highest number of negative behavior records by year group

The bar chart above displays the top 10 students with the highest number of recorded negative behaviors. The vertical axis represents the number of behaviors (from 0 to 70), and the horizontal axis shows student names along with their year group. As shown, student "amil Kuba" ranks first with 64 negative behavior records in Year 9, while student "Edwards" ranks tenth with 37 records in Year 8. This data helps the school identify students who require immediate intervention.

INSIGHT 3: Frequency Distribution by Color Status

This table and chart show the distribution of students with more than 10 negative behavior records, categorized by color-coded status (Yellow, Orange, Red). The highest frequency is in the Orange status with 1,307 students, indicating a need for ongoing attention and follow-up.

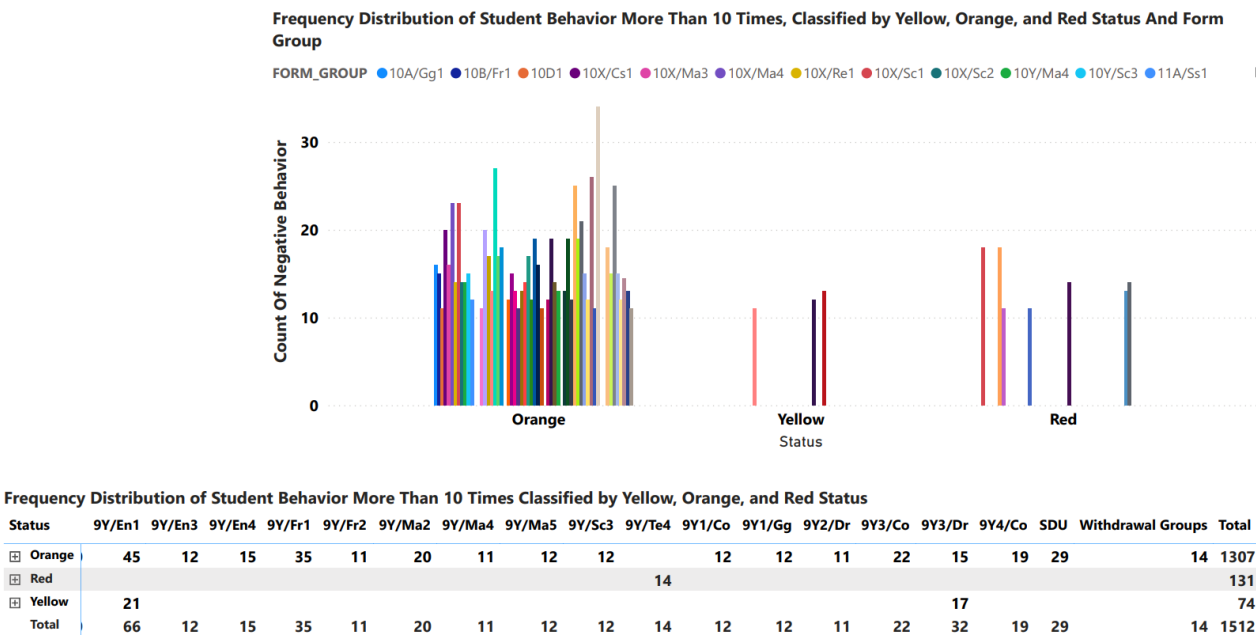

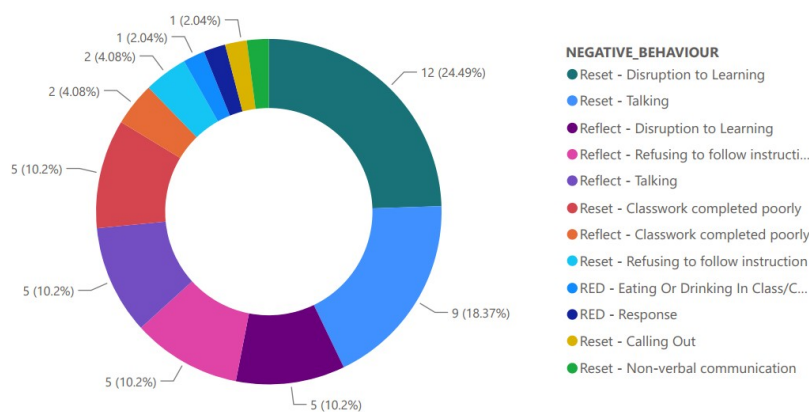

Figure 3: Frequency distribution of color-coded status for students with more than 10 negative behaviors

This analysis includes two parts: a table and a bar chart. The color-coded statuses include three categories: Yellow (needs monitoring), Orange (needs attention and follow-up), and Red (needs immediate intervention). The table shows the exact distribution of students in each category, and the bar chart visualizes this distribution. As shown, the majority of students (1,307) fall into the Orange status, indicating a wide range of students with negative behaviors requiring attention. Twenty-nine students in the Red status require immediate intervention, and 21 students in the Yellow status require ongoing monitoring. This analysis helps school administrators allocate resources effectively.

INSIGHT 3: Individual Behavior Pattern - Case Study (Amze Yousu)

This donut chart shows the behavior pattern of student "Amze Yousu," who has recorded a total of 49 negative behaviors. The most recorded behavior is "Reset - Disruption to Learning" with 12 cases (24.49%).

Donut Negative Behavior Chart Of "Amze Yousu"

Detail Of Behavior Base on Student Name

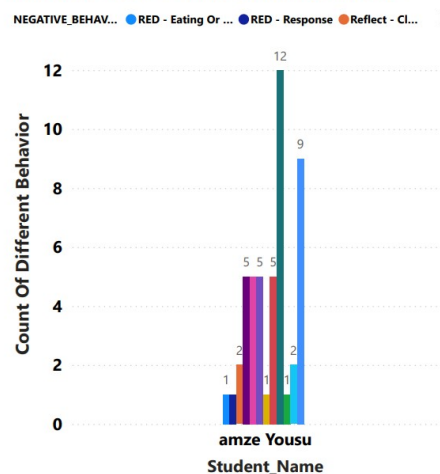

Figure 4: Behavior pattern of student Amze Yousu

The donut chart above shows the distribution of different types of negative behaviors recorded for student "Amze Yousu." This student has recorded a total of 49 negative behaviors across various categories. As shown in the chart, "Reset - Disruption to Learning" accounts for the largest share with 12 cases (24.49%). This is followed by "Reset - Talking" with 9 cases (18.37%) in second place. Behaviors including "Reflect - Disruption to Learning," "Reflect - Refusing to follow instruction," and "Reflect - Talking" each account for 5 cases (10.2%). Notably, over 50% of this student's negative behaviors fall into two categories: "Disruption to Learning" and "Talking," indicating a need for targeted interventions in classroom management and self-regulation. This analysis helps school counselors design personalized support programs for this student.

INSIGHT 5: Average Frequency Distribution of Negative Behaviors by Year Group

This table shows the average frequency of specific negative behaviors across different year groups (Years 7–11), focusing on behaviors that occurred more than 10 times. This helps identify which behaviors are most common in each year group.

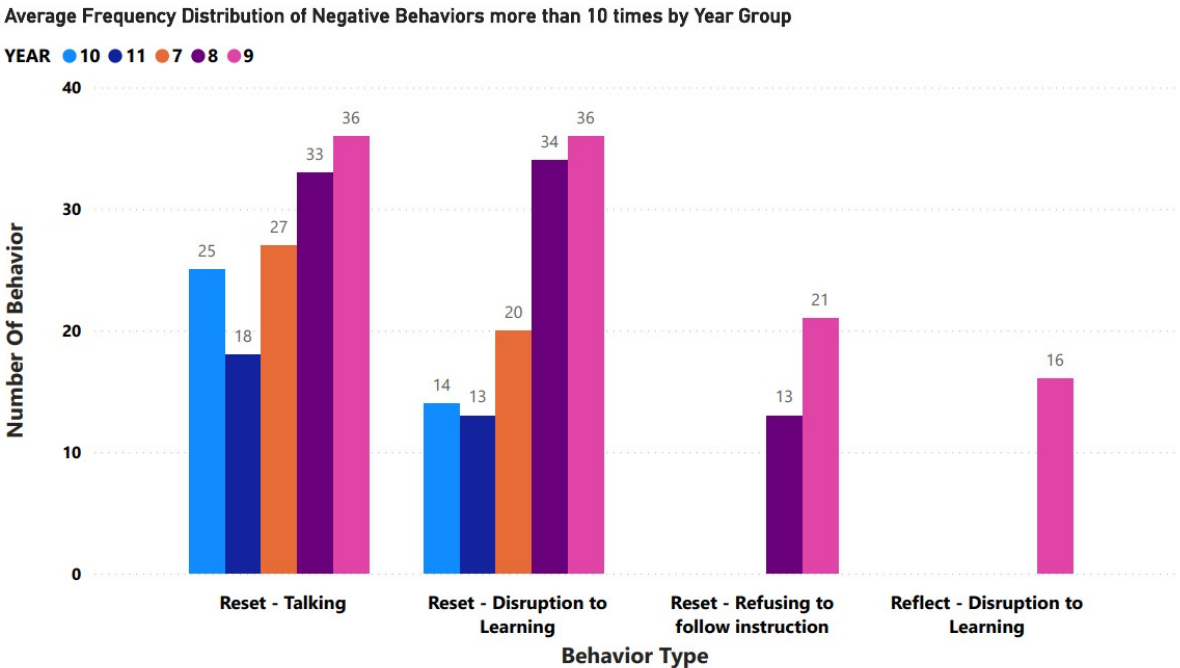

Figure 5: Average frequency of negative behaviors (more than 10 times) by year group

This table provides a detailed breakdown of average behavior frequencies across year groups, focusing on specific behavior types that occurred more than 10 times. The data covers four key behavior categories:

- **Reset - Talking:** Year 7 (18), Year 8 (25), Year 9 (18), Year 10 (27), Year 11 (33)
- **Reset - Disruption to Learning:** Year 7 (14), Year 8 (13), Year 9 (20), Year 10 (34), Year 11 (36)
- **Reset - Refusing to follow instruction:** Year 7 (13), Year 8 (0), Year 9 (21), Year 10 (0), Year 11 (0)

- **Reflect - Disruption to Learning:** Year 7 (0), Year 8 (0), Year 9 (16), Year 10 (0), Year 11 (0)

Key observations:

- **"Reset - Disruption to Learning"** shows a clear upward trend, increasing from Year 7 (14) to Year 11 (36), with a significant jump in Years 10 and 11
- **"Reset - Talking"** also shows an upward trend, rising from Year 7 (18) to Year 11 (33), with Year 10 and 11 showing the highest frequencies
- **"Reset - Refusing to follow instruction"** appears concentrated in Years 7 (13) and 9 (21), with zero occurrences in Years 8, 10, and 11
- **"Reflect - Disruption to Learning"** only appears in Year 9 (16), suggesting this is a specific issue for that year group

This analysis helps school leadership understand how behavior patterns change as students progress through year groups. The upward trend in disruption and talking behaviors in later years suggests that intervention strategies should be tailored by year group, with increasing focus on engagement and communication as students approach their final years.

 INSIGHT 6: Daily Behavior Pattern - Students with Highest Daily Frequency

This table shows the students with the highest daily frequency of negative behaviors, indicating which students are consistently appearing in daily behavior records and may require immediate intervention.

Daily Frequency Distribution of Negative Behaviors more than 3 times Base Form Group

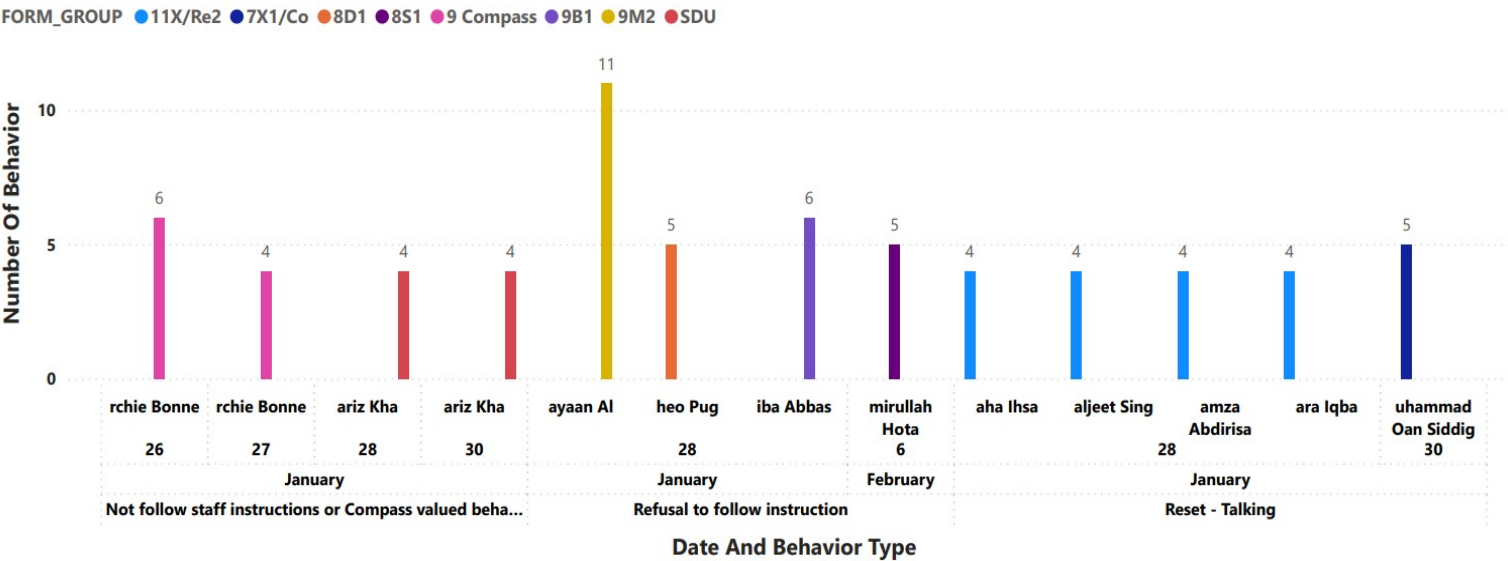

Figure 6: Students with highest daily negative behavior frequency

This table displays students who have recorded the highest number of negative behaviors on a daily basis. The data shows both the student names and the number of behaviors recorded for each. Key observations include:

- **"ariz Kha"** appears twice with 284 and 304 behaviors, indicating consistently high daily frequency
- **"rchie Bonne"** appears twice with 266 and 274 behaviors
- **"ayaan AI"** shows 311 behaviors, the highest single entry in the table
- **"mirullah Hota"** shows 65 behaviors, the lowest in this group

The presence of the same students appearing multiple times with high frequencies suggests persistent behavioral patterns that require targeted intervention. Students like "ariz Kha" and "rchie Bonne" show consistently high numbers across multiple entries, indicating that their behavioral challenges are ongoing and not isolated incidents.

This analysis helps school leadership identify students who need immediate, intensive support and enables the creation of personalized behavior intervention plans for those with the highest daily frequencies.

INSIGHT 7: Time-Based Behavior Patterns

This analysis categorizes behavior incidents by time of day to identify peak periods. The findings reveal that if the school focuses on these peak times, it could resolve approximately 40–45% of disciplinary issues and improve overall teaching quality.

Frequency Of Negative Behaviors More Than 200 Times Base on Form Group And Time

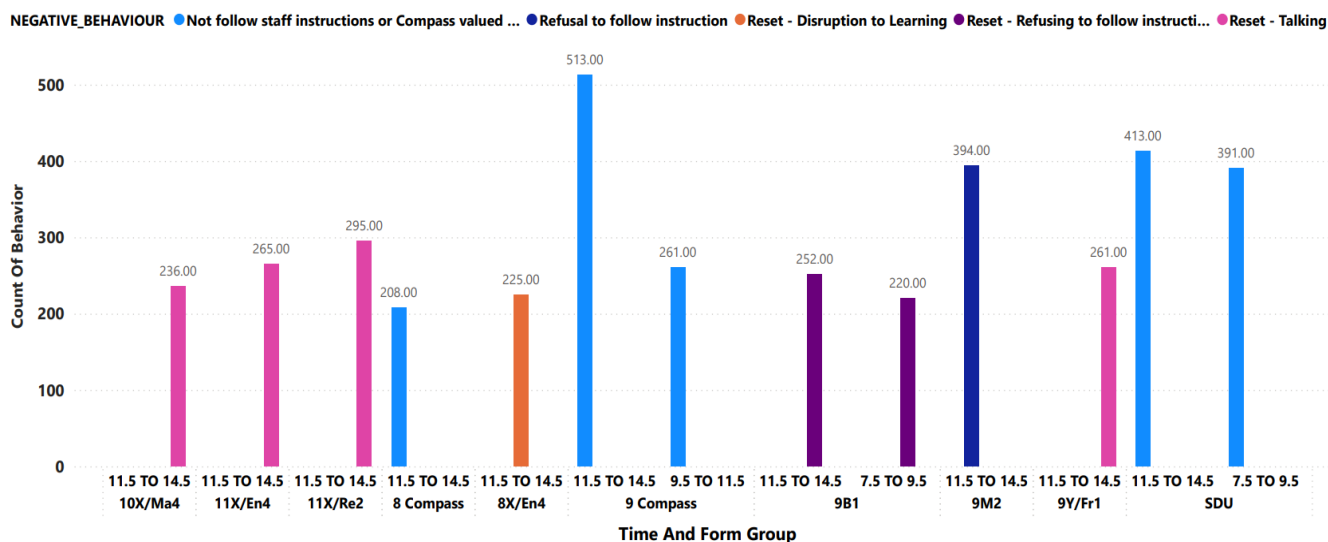

Figure 7: Frequency of negative behaviors by time of day

This analysis breaks down behavior incidents across five time slots: 6:00–7:30 (Low), 7:30–9:30 (Moderate), 9:30–11:30 (High), 11:30–14:30 (Peak), and After 14:30 (High). The data reveals that the peak period is 11:30–14:30, which corresponds to the midday and lunch period. Afternoon sessions also show high frequency, while early morning shows the lowest.

Why This Matters:

Approximately 40–45% of all behavioral incidents occur during the peak midday period (11:30–14:30). When combined with the afternoon session, this figure exceeds 60%. This means that by strategically deploying staff, restructuring lunchtime activities, and implementing targeted interventions during these hours, the school could realistically resolve nearly half of its disciplinary challenges.

Practical Impact:

- ✓ Strategic staff deployment during peak hours
 - ✓ Structured activities during lunch and transition times
 - ✓ Targeted interventions for afternoon sessions
 - ✓ More instructional time and improved teacher morale
 - ✓ Enhanced overall teaching quality and student outcomes
-

✓ Conclusion

This analysis of 910 students reveals that behavioral challenges follow clear patterns by student, class, year group, and time of day.

Key takeaways:

- 8.67% of students are high-risk (>20 behaviors)
- 1,307 students fall into Orange status
- Year 9 shows the highest frequency
- 40–45% of incidents occur during midday peak hours

The most actionable insight: By strategically deploying staff during peak midday hours, the school could resolve nearly half of its disciplinary issues.
